

Use effects to handle multiple actions

```
@Effect()
login$ = this.actions$
  .ofType(
    `[Login Page] Login`,
    `[Login Modal Page] Login`
  )
  .pipe(
    exhaustMap(auth =>
      this.authService
        .login(auth)
        .pipe(
          map(user => new LoginSuccess({ user })),
          catchError(error => of(new LoginFailure(error)))
        )
    ),
  );
```
